ABSTRACT OF THE DISCLOSURE

A method of monitoring the operational status of and initiating image processing device control commands on one or more image processing devices from a remote location, said image processing devices each having a control computer for controlling operation of the device, including representing one of said image processing devices at the remote location; posting operational status indications relating to the one of said image processing devices and/or device set-up parameters at said remote location; adjusting the device set-up parameters by generating an image processing device control command from the remote location; and transmitting said command to the image processing device control computer. This method includes the ability to adjust such things as contrast, enlargement/reduction, network configuration and passwords from the remote location.
